*Concealment Vest*

MEMORANDUM FOR THE RECORD

SUBJECT: Trip Report

1. On 26 June 1956, the undersigned met at Griffiss Air Force Base, Rome, New York with the following people:

Mr. Lawrence Pinneo	RADC
Mr. Samuel Beane	RADC
Major William Fulton	RADC

The subject under discussion was the work completed to date on the "Concealment Vest".

2. The Air Force people were brought up to date on the work accomplished by Universal Match Corporation. Slides were shown of the vest being worn and the mold used to form vests. The only prototype vest on hand that carries the electronic equipment was shown to the other personnel in order that their comments could be obtained.

Major Fulton, Messrs Pinneo and Beane were pleased with the approach being taken since it would provide flexibility in arrangement of equipment and in the size of the vest. This means it is possible to tailor make the vest to fit very small or very large people. The Air Force does need to be provided at the termination of the project with detailed information which would permit them to mold vests to carry radar receivers of larger sizes than the three presently on hand. Mr. Beane stated that the larger antenna would be used to obtain information on radar signals in the general frequency ranges covered by the three antenna of the present design.

It is the intention of the undersigned to have the three persons named in paragraph one accompany me on a visit to Armour Research Foundation when work there has progressed to an acceptable point. Any modifications or new ideas that might result from such a meeting could be incorporated into the design.

ACTION: On July 3 the undersigned will request a proposal from  to continue the work on the concealment vest.
